ROCK TOPPER / STADIUM TOPPER RGB LIGHT STRIP INSTRUCTIONS

This kit contains four RGB light strips that are approximately 4 feet long each. The strips have adhesive backing. Also included are four 7 foot RJ11 style cords that allow you to mount them anywhere you like on your game.

You can mount varying combinations of locations: all 4 strips on the back box, 2 back box and two underneath game, all 4 under game, etc.

Basic Install

1. Plug black RJ11 cord into back of topper as show below. There are 4 separate connectors, one for each strip.
2. Route cord and secure so RGB strip to a location you desire. Note, there is adhesive backing on the RGB strips if you choose to use it.
3. Try to support the cord weight with something other than the light strip, so it stays secure.
4. Get creative with locations. The picture on page 2 shows the outer strips on a GnR back box that take advantage of the wood on the back to turn the strip out to the sides.
